

Senior .Net Developer

We are currently seeking an exceptionally talented Senior .Net Developer to join our brand new team. Our ideal candidate will have a solid understanding and experience with enterprise level development using the latest .Net stack and front-end frameworks, work close with architects and product owners in distributed team environment to deliver on project milestones.

Key Responsibilities

- Estimate, design and implement back end components and database schemas for the User Stories and Features developed by bigger team including architects, principal developers, front end developers, Product Owners and UX.
- Build web application with WCF services, NServiceBus, dependency injection, NHibernate and SQL Server.
- Integrate ASP.Net MVC presentation layer defining models and implementing controllers. Work with UI developers implementing views with Razor templates using custom UI framework.
- 3rd party integration with partners around the World. Supporting and developing links with international payment providers. Working with web services (SOAP, REST) and third party APIs.
- Produce clear and maintainable code, follow industry best practices and designs.
- Take direction from the architecture team, welcome their feedback and discuss application designs.
- Track the code changes from developer's machine through Continuous Integration pipelines to test and production environments. Keep technical ownership of the work product at every stage of the development and deployment process.
- Creation and execution of test plans and test cases (both automated and manual) for user stories.
- Involved in organizing and executing testing prior to release the product into Staging environment.

Required Skills:

- 5+ years of .net development experience. E-commerce applications development is a plus.
- Recent and thorough knowledge of Microsoft .Net Framework, C#, Microsoft SQL Server and ORM. NHibernate is desirable but experience with other ORM, e.g. Entity Framework will suffice.
- Knowledge and practical experience with dependency injection containers. Experience with Castle Windsor is a plus but not mandatory.
- Experience with code branching strategies, complex merges and Continuous Integration. Knowledge of Git and experience with Jenkins is a plus.
- Strong understanding of ASP.NET MVC. Experience of application development with ASP.NET MVC 4 is a plus but not mandatory.
- Strong interpersonal skills with the ability to work well in a distributed team environment.
- Solid understanding or commercial experience with asynchronous (messaging-based) applications. Knowledge of NServiceBus is a plus.
- Experience writing test automation using NUnit and Selenium 2 Webdriver.
- Experience with cross browser and cross platform testing (IE, FF, Chrome, Safari, Windows, Mac, Android, iOS).

Desired Skills:

- Experience with Ruby scripting.
- Experience with MSBuild projects in Jenkins Build System.
